

Linux - Pseudocodes

Aug 21-2026

Lap - 12

Q.1 - int ~~10~~ print Numbers
{
 n = 0
 while [n ~~<~~ 10]
 {
 print n
 n = n + 1
 }
}

Q.2 - int ~~10~~ print Even Numbers
{
 for [i = 0 to 50, i++]
 {
 If $((i \% 2) = 0)$
 {
 print i
 }
 }
}

Q.3 - int print Multiplication Table (int number)
{
 number = (input from user)
 n = 1
 Until [n > 15]
 {
 print (n * number)
 n = n + 1
 }
}

Q. 4 `int[]; int[] readFile AND print int[] (nums.txt)`

```

{
    numbers[] = read nums.txt
    print numbers[*]
    l = get length (numbers[])
    for i in numbers[] = 0 to l-1
    {
        print (number[i] * 2)
    }
}

```

Q. 5 `float divide (int var1, int var2)`

```

divide() = {
    If [ var2 != 0 ]
    {
        local quotient = var1 / var2
        local remainder = var1 % var2
        print quotient upto 2 decimal places
        print remainder
    }
    Else
    {
        print (Error : trying to divide by zero)
    }
}

result = divide()
print result
}

```

Q.6 int find Maximum (int var1, int var2)

```

{
    maximum () = {
        If [var1 > var2]
        {
            print ['The maximum is' var1]
        }
        Else
        {
            print ['The maximum is' var2]
        }
    }
    result = maximum ()
    print result
}

```

Q.7 void/str Check Dir (<dirname>)

```

{
    check () = {
        <dirname>
        If [dir exists]
        {
            list <dirname>
        }
        Else
        {
            <dirname> = new directory ()
        }
    }
}

check ()
}

```

Practice Problems

Q.1

int CountLinesWords&Characters(filename)

Q.2

{

If (filename exists)

{

words = count the words in filename

character = count the characters in filename

lines = count the lines in filename

print words

print character

print lines

}

Else

{

print 'file doesnot exist'

}

}

Q.3 Step 1 List the contents of current directory in descending order using ls -S.

2 print the maximum size file name using ls -S | head -n 1

3 Also print the size using the above command and piping it to du -sh.

Practice problem

Q.1) find word (string word, string filename)

```
{  
  if (File exists)  
  {  
    search word in filename  
    print lines containing word  
  }
```

else

```
{  
  print "File does not exist"  
}
```

```
}
```

Q.2 int multiplicationTable (int number)

```
{  
  for (i = 1 to 20)  
  {  
    result = number x i  
    print number 'x' i " = " result  
  }
```

```
}
```

Q.3 Check Disk Usage()

```
{  
  usage = get current Disk Usage  
  print "Current disk usage = " usage  
  if (usage > 80)  
  {  
    print "Warning: Disk usage is above 80%."  
  }  
}
```
